

# Take Home Assessment

## Task: Build a Simple Shopping App

You need to create a simple shopping app. The app should allow consumers to browse clothing items, interact with them, and make purchases. Follow the steps below to complete the assignment:

---

### Requirements:

1. **Browse Inventory:** Display a catalog of items from the [database](#), including details like name, price, and description.
  2. **Add to Cart:** Enable users to add items to a cart. Ensure the cart shows a summary of selected items, quantities, and total price.
  3. **Checkout and Purchase:** Implement a checkout flow where users can review their cart, input their details (e.g., name, address), and complete a purchase. You can simulate a payment process.
- 

### Deliverables:

1. A working app that meets the requirements.
2. A demo video of the app in action displaying the data from the [given database](#).
3. A brief explanation of your implementation approach, including any technologies used.

Please know that we are not looking for perfection. Submit whatever you were able to accomplish within the given timeframe.

---

### Submission:

Once you are done with the assignment, please fill in [this form](#) to submit your video.

**All the best!!**
